

# A clean response to Covid-19

With the Coronavirus now designated a pandemic, many businesses are working with EFS Europe to sanitise their premises to protect their staff, customers and to keep their business operational.

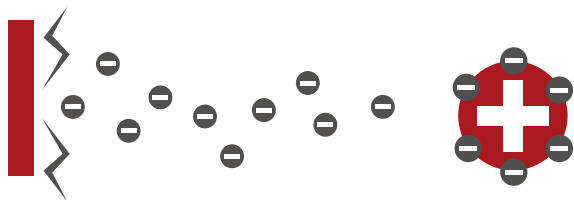

Our Covid-19 Ionic Chemical Spray sanitises the entire workplace environment creating a hostile tensive surface for all pathogens and bacteria preventing them from replicating, causing them to die off.

This unique process electrically charges the sanitising chemical, enabling it to adhere to all surfaces throughout the workplace.

The chemical disinfects and kills bacteria providing protection for up to 28 days.

Re-application is recommended every 21 days for ongoing protection.

Let us work with you to prepare, prevent and protect your staff and business from COVID-19.

An electrode atomizes the cleaning solution

The charged particles are attracted to the surface area, wrapping around it

The particles wrap around the surface

3D objects & hard-to-reach places receive a clean, even coat
